Beet Pulp Molasses Shreds

Sugar beet pulp shreds are the fibrous portion of the sugar beet left after the sugars are removed. Like sugar beet pulp, it is highly digestible and makes an extremely palatable feed in a form that is considered less dusty than hay. Molasses is added to shreds, to make it sweeter and more desirable to finicky, active, or older horses, and helps them keep their weight at an optimum level.

This is a typical analysis of our beet pulp molasses shreds. Variations may occur depending on source.
